

Tyne, United Kingdom

The Tyne Terminal is the only independent bulk liquid storage facility on the estuary of the River Tyne.

It offers two deep water jetties at a busy port with good sea connections to continental Europe, as well as excellent road links to the north of England and Scotland. Products can be received or redelivered by both road and sea 24 hours a day.

In addition to its general chemical and petrochemical storage competencies, the terminal has expertise in the handling of marine and aviation fuels, as well as biodiesel and raw materials for biodiesel production.

Tyne Terminal offers dedicated stainless steel storage and pipelines for potable alcohol with tank capacities ranging from 205,000 litres up to 1,500,000 litres.

The terminal also offers a wide range of value-added operations to complement its storage offering. These can include bulk breaking operations such as

semi-automatic drumming and IBC (Intermediate Bulk Container) filling, as well as reduction with demineralised potable grade water.

The terminal is an HMRC bonded warehouse and is equipped with extensive security measures including CCTV, alarmed electric perimeter fencing and night security guards. The terminal participates in the CDI-T (Chemicals Distribution Institute – Terminals) inspection programme.

History and development

Tyne Terminal was originally privately owned and comprised terminals on both the north and south banks of the river. Following its acquisition by what was then Simon Storage Limited, the terminal was consolidated at North Shields. It has since been expanded by the construction of new tankage, for example for potable alcohol, in the early 1990s. The terminal's capacity

can readily be modified to provide bespoke storage solutions; development land is available for new facilities and partnership ventures.

Technical skills

In addition to its general chemical and petrochemical storage competencies, Tyne Terminal has special expertise in the handling of fuels, including marine and aviation fuel, and the warehousing, blending and treating of potable alcohols and ethanols.

For over 20 years the terminal has been providing an outstanding service to some of the world's leading drinks companies. Building on our deep understanding of our customers' needs and expectations, we offer a world class capability for handling and storing potable alcohols. This includes more than four million litres of dedicated storage, a wide range of added value capabilities, and the ability

to receive and deliver products by road or sea 24 hours a day.

The capacity at the terminal can easily be modified to provide tailor-made storage to suit a customer's precise requirements, which can include installing new stainless steel pipelines and pumps, heating lines and tanks, applying special coatings and nitrogen blanketing.

In addition to its long history of handling bulk liquid wastes under permit, Tyne Terminal also holds a waste transfer licence allowing it to store a wide range of technical wastes, such as cement kiln fuel and used cooking oil. Since 2012, Tyne Terminal has also held the necessary Radioactive Substance Regulations (RSR) permits to handle NORM (Naturally Occurring Radioactive Material) products typically originating from the North Sea.

Facilities facts

- 57,000m³ of storage
- HMRC warehousing, including methylation, reduction and fortification of bulk ethanol
- mild steel, stainless steel and lined tankage
- heated tanks
- nitrogen blanketed tanks
- semi-automated drumming facility ex tank or road tanker
- land for expansion and specific client projects
- dedicated potable alcohol storage
- COMAH Upper Tier site
- hydrocarbon oil warehousing facility
- marine bunkering capability
- 2 jetties (up to 30,000 DWT – subject to limitations)
- RSR permit to handle NORM products
- waste management licence to handle hazardous and non-hazardous waste
- two RoSPA Orders of Distinction, five President's Awards, five Gold Medals and four Gold Awards

Tank capacities

Capacity	Number
> 5,000m ³	2
> 2,500m ³	4
> 750m ³	24
< 750m ³	32

Total 57,000m³ in 62 tanks
