

# Mannheim South, Germany

In partnership with Inter Terminals' Mannheim North Terminal, Inter Terminals' Mannheim South Terminal in Germany provides one of Europe's largest bulk liquid storage facilities.

# Mannheim South, Germany

With 223,000m<sup>3</sup> of modern tankage in a prime position on the River Rhine, the Mannheim South Terminal offers the ideal location for supplying the southern part of Germany as well as neighbouring countries.

Specialist storage and handling solutions can be provided to meet various customer requirements, from petroleum storage – including gasoline, diesel, heating oils, alternative fuels, and petrochemicals – to chemical products such as solvents, resins and various polymer intermediates. The terminal can provide a complete logistics solution, with the flexibility to ship and receive, tranship and blend products via barge, rail and road. The terminal participates in the CDI-T (Chemicals Distribution Institute – Terminals) inspection programme.

**History and development**  
Inter Terminals' Mannheim terminals have a long and successful track record of supplying bespoke storage,

handling, blending, and distribution services across the complete spectrum of the chemical, petroleum and petrochemical industries.

### Technical skills

Mannheim South's strategic location is complemented by a wealth of technical expertise in bulk liquid storage and handling. Carbon steel tanks are equipped with dedicated pipework systems; product specific treatment, such as heated and blanketed storage, can be provided.

A range of specialist services is available for the safe storage and handling of petrochemical and hydrocarbon products. The terminal has high- and low-flash-point storage facilities, hazardous materials competencies, and vapour recovery units for gasoline storage.

Additional services include blending for various products, automated handling systems, and fully automated road loading.

### Facilities facts

- 223,000m<sup>3</sup> of storage
- specialist petrochemical and hydrocarbon storage facilities
- high- and low-flash-point storage
- carbon steel tankage and dedicated pipework systems
- easy access to sea ports by road, rail and barge
- transhipment facilities
- specialist petrochemical and hydrocarbon storage
- hub for the heart of Europe in a strategic location
- optimal combination of transport modes
- intermediate storage facilities
- wealth of technical expertise and proven experience in bulk liquid storage and handling
- hazardous materials competencies
- bespoke solutions including heated and blanketed storage
- automated handling systems
- product blending facilities
- product specific treatment
- automated road loading
- vapour recovery for gasolines
- break-bulk and build-bulk services
- computer-based stock control
- dedicated safety systems
- certified ISO 9001:2008 Quality Management Systems
- certified ISO 14001:2004 Environmental Management Systems

### Tank capacities

Capacity	Number
550 – 22,800m <sup>3</sup>	84
< 150m <sup>3</sup>	14

Total 223,000m<sup>3</sup> in 98 tanks
