

Asnaes, Denmark

Located in the Danish Straits, Asnaes Oil Terminal (AOT) provides a strategic storage hub for the transshipment of fuel oil and vacuum gas oil (VGO) within Europe and to the Americas.

History and development

As part of Inter Terminals' four-terminal complex in Denmark, AOT has a successful track record of supplying specialist storage, handling, blending, and distribution services to the oil industry. The terminal has historically high utilisation rates and offers an extensive range of tank capacities up to 90,000m³ across six mild steel tanks.

Technical skills

AOT's strategic location is complemented by a wealth of technical expertise to ensure the safe storage and handling of fuel oil and VGO. The terminal's mild steel tankage is heated and insulated and tank-to-tank and in-tank homogenising / blending facilities are available via mixers or jet nozzles.

In addition to high volume tankage, AOT has access to two deep water jetties for loading / discharge of product. The terminal offers loading rates of up to 2,500 cbm/hour and can accommodate vessels up to 175,000 DWT and a maximum LOA of 290m. AOT also offers storage for an adjacent refinery. The terminal is ISO 14001 and OHSAS 18001 certified.

Facilities facts

- 430,000m³ of storage
- suitable for fuel oil and VGO
- mild steel tanks
- temperature controlled storage
- tank-to-tank and in-tank homogenising / blending via mixers or jet nozzles
- Authorised Economic Operator – includes access to simplified customs procedures
- high loading rates between 1,500 – 2,500 cbm/hour
- deep water jetties (14.2m draft restriction) – 2 berths
- max size vessel 175,000 DWT
- max LOA 290m
- pier-to-pier possibilities
- pipeline connection to adjacent refinery
