

Göteborg, Sweden

Göteborg Terminal occupies a prime position on Sweden's west coast at the Port of Göteborg, Scandinavia's largest port and ice free all year round.

The terminal's geographic location enables easy access to the whole of the Baltic Region, and all parts of Scandinavia as well as the North Sea / Atlantic. In addition to its close proximity to the open sea, the terminal offers convenient access to major road and rail networks and has direct pipeline links to three local refineries.

The largest facility in Inter Terminals' Swedish storage network, Göteborg Terminal operates modern systems and services to enable the safe and efficient storage and handling of products such as fuel oil, vacuum gas oil (VGO), diesel, jet fuel, and gasoline. The terminal also has a comprehensive and sophisticated fuel oil blending facility serving the needs of the specialist fuel export market.

History and development

Joining Inter Terminals' European storage network in June 2015, Göteborg Terminal has benefitted from historically high investment levels and serves a well-

diversified customer base across a broad spectrum of fuel oil and associated products. It has an extensive range of tank capacities up to 90,000m³ across 73 tanks / five rock caverns and offers potential for future growth.

Technical skills

Göteborg Terminal's strategic location for import, export and distribution is complemented by a wealth of technical expertise in the safe storage and handling of hazardous products such as gasoline, VGO and jet fuel. The terminal is managed and operated by an experienced and highly qualified team. Dedicated systems and specialist services include fuel oil blending, heated tanks with nitrogen blanketing, vapour recovery units, and customs and tax bonded storage.

In addition to high volume tankage, Göteborg Terminal is able to receive and redeliver product by vessel, barge, truck or pipeline.

Facilities facts

- 904,000m³ of storage
- mild, coated and stainless steel tanks
- man-made rock caverns
- heated tanks
- comprehensive fuel oil blending facility
- vapour recovery units
- 3 jetties (max 80,000 DWT)
- 3 bunker jetties
- max draft 12.5m
- direct pipeline links to local refineries
- close proximity to road and rail networks
- customs and tax bonded storage
- transhipment services

Tank capacities

Capacity	Number
> 10,000m ³	27
> 5,000 m ³	29
> 2,500 m ³	6
> 1,500m ³	4
> 750m ³	3
< 750m ³	4
rock caverns	5

Total 904,000m³ in 73 tanks and 5 rock caverns
